PROJECT BRIEF

Digital Literacy Awareness Project

Deadline: 31 March 2026,

Objective

The main purpose of this project is to create awareness about Digital Literacy among college students and help them develop essential skills for safe, responsible, and professional use of digital platforms. In today's world, being digitally literate is as important as academic knowledge. This project combines awareness with practical hands-on activities.

Key Deliverables:

1. Digital Literacy Awareness Infographic Create a visually appealing, informative infographic using Canva that explains the meaning and importance of Digital Literacy.
2. Student Digital Portfolio Design a professional digital portfolio on Canva showcasing personal details, academic background, skills, projects, and achievements.
3. Exploration of Coding and Collaboration Platforms Study and prepare a short report on GitHub, LinkedIn, and Stack Overflow, explaining how these platforms are useful for students.
4. Professional Email and Etiquette Guide Prepare ready-to-use professional email templates along with a guide on proper digital etiquette.
5. Cybercrime Awareness Case Study and Prevention Guide.

Final Output:

All the above deliverables will be compiled into one well-designed, single PDF document.

Learning Outcomes:

This project will help students improve their digital skills, understand online safety, learn professional communication, and become responsible digital citizens.

TASK 1: Write Up

Digital Literacy Awareness Infographic

Tool Used:

The infographic was created using Canva.

What the Design Shows:

This vibrant and student-friendly infographic is designed as a clear, easy-to-read poster that promotes awareness about digital literacy. It effectively breaks down three main sections:

- **What is Digital Literacy?** – A simple and concise definition to help students understand the core concept.
- **Useful Digital Tools for Students** – Highlights six essential tools: Notion, Grammarly, Canva, Quizlet, ChatGPT/Gemini, and Perplexity.
- **Safe Internet Practices** – Presents eight practical and actionable tips, including using strong passwords, thinking before clicking, protecting personal information, and staying secure on public Wi-Fi.

The design features bold headings, relevant icons, bullet points, and bright, engaging colours to make the content visually appealing and accessible for students.

One Thing I Found Difficult/Interesting:

The most interesting aspect was organizing the content in a clean and balanced layout without making it look overcrowded. The biggest challenge was maintaining the right balance between text and visuals. I had to significantly shorten and simplify the points to ensure the infographic remained readable, clear, and visually appealing.

TASK 2: Write Up

Building Student Digital Portfolio

For my Student Digital Portfolio, I have selected three powerful and complementary platforms: GitHub, LinkedIn, and Stack Overflow.

GitHub serves as my primary coding portfolio, where I upload and showcase all my academic projects, assignments, and personal contributions.

LinkedIn allows me to build a professional profile, connect with seniors, alumni, and industry professionals, and highlight my skills, achievements, and experiences.

Stack Overflow is a valuable community platform where I can ask technical questions, provide answers, learn from experienced developers, and strengthen my programming knowledge.

Over the next four years of college, I am committed to using these platforms consistently and strategically. I plan to regularly upload all my projects on GitHub to build a strong and impressive coding portfolio. On LinkedIn, I will actively expand my professional network, share my accomplishments, and engage with industry experts. On Stack Overflow, I aim to solve at least 2–3 questions every month to enhance my skills and gain reputation within the developer community.

Together, these three platforms will help me establish a credible digital presence, demonstrate my capabilities, and better prepare me for future internships and job opportunities.

TASK 3: Write Up

Part A – Coding Practice (HackerRank)

Tool Used:

I used HackerRank for coding practice.

What I Practised:

On HackerRank, I solved beginner-level coding problems to strengthen my programming logic, syntax, and problem-solving skills. The platform offered well-structured challenges that helped me understand and apply core concepts such as variables, loops, and conditional statements through practical exercises.

One Thing I Found Difficult / Interesting:

The most interesting part was receiving instant feedback after every submission, which clearly showed which test cases passed or failed. The most difficult part was debugging errors and understanding why certain logic did not work as expected.

Part B – Google Workspace Collaboration (Google Forms Quiz)

Tool Used:

I used Google Forms, part of Google Workspace, to create a digital quiz.

What I Built:

I designed a Digital Literacy Awareness Quiz for my batchmates consisting of exactly 5 questions. The quiz combined multiple-choice and short-answer questions to assess both basic awareness and deeper personal understanding of digital literacy topics.

One Thing I Found Difficult / Interesting:

The most interesting part was creating questions that were relevant and relatable for my batchmates. The most challenging part was framing the short-answer questions clearly so that the responses would be meaningful and easy to evaluate

TASK 4: Write Up

Part A – Professional Email Writing

Tool Used:

I used Google Docs (Google Workspace) to draft and format both professional emails.

What I Built:

I prepared two well-structured professional emails by following standard email etiquette. Each email included a clear subject line, formal greeting, concise and purposeful body, and a polite closing.

Part B – Responsible Social Media Use: Do's and Don'ts

What I Built:

I created a simple yet practical checklist consisting of 5 Do's and 5 Don'ts for responsible social media use, specifically tailored for college students.

One Thing I Found Difficult / Interesting:

The most interesting part was realizing how common everyday habits — such as posting real-time locations or sharing news without verification — can actually be irresponsible or risky. The most difficult part was keeping each point short, clear, and impactful while staying within the word limit.

TASK 5: Write Up

Part A – Case Study: Cyberbullying

Tool Used: I used Google for research and Google Docs to write and format the case study.

What I Studied: Cyberbullying refers to the use of digital platforms, social media, messaging apps, or online forums to harass, threaten, or humiliate others. For this case study, I examined a common scenario faced by college students in India: a student receiving repeated mocking comments and morphed images shared across a WhatsApp class group, leading to emotional distress and academic decline.

The case highlighted how cyberbullying differs from traditional bullying: it follows the victim everywhere, operates 24/7, and can reach a large audience instantly.

What Surprised Me Most / One Habit I Will Change: What surprised me most while researching this topic was that a large number of cyberbullying victims never report the incident either out of shame or because they believe no action will be taken. I also did not realise how severely it impacts mental health, sometimes leading to anxiety, depression, and academic dropout.

Part B – Prevention Checklist: Stay Safe Online

Tool Used: I used Google Docs to create the checklist.

What I Built: A practical "Stay Safe Online" checklist with 8 specific, actionable tips for college students in India.

One Thing I Found Difficult / Interesting: The most interesting part of this task was discovering that India has a dedicated Cyber Crime Portal where students can report online harassment anonymously. The difficult part was selecting only

8 tips from a very long list. Almost every point felt essential and important to include for student safety.
